PROFESSIONNAL EXPERIENCES

● Transactionnal web apps (React.js)

Coding and design of two E-commerce websites: Bikanky Montreal and Crown Fashion. Combining React and Redux for the "Front-End", they both have a structure aimed at facilitating their maintenance. The reuse of components as well as the use of Higher Order Components (HOC) are concepts that were taken into account from the beginning of their conception in order to avoid repetition of code and to promote their modularity. User management and data storage are implemented with Firebase. Payments go through Stripe's API.
